

How to deploy application to Azure cloud.

- Create Azure account online with username/email address and password.
- Add Visual Studio user (The one linked to Azure) to Visual Studio.
- Create application.
- In the solution explorer, right click the solution project.
- Press the “Add Windows Azure Cloud Service Project”
- A new Azure project is added to your solution with all Azure files.
- Deploy the service
 - Right click the new Azure project
 - Select Publish
 - A new dialog box will appear
 - Click the link in the dialog box to sign into Azure
 - A new browser window will appear so you can login using your Azure account
 - A new publish settings file will download(xml file)
 - Save this file onto your desktop
 - Go back into Visual Studio
 - Click the import button and import the publish settings file (xml file downloaded earlier)
 - Choose subscription type you want to apply the web service to.
 - Click the next button
 - Click the Hosted service drop down (optional) Or you can use the existing name (skip the other steps below)
 - Click new (optional)
 - Name the service (Optional)
 - Select the region (Optional)
 - Click next
 - Click publish
